### DETAILED ACTION

1. The indicated allowability of claims 3-5 and 8 are withdrawn in view of the newly discovered reference(s) to Davidson. Rejections based on the newly cited reference(s) follow.

#### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 2, 4-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yurek et al. (5,690,644) in view of Davidson (5,647,858). Yurek et al. disclose a catheter system for delivering a self-expanding stent comprising all the limitations as claimed except the coating layer being pyrolytic carbon or ceramic. Davidson discloses a catheter sleeve including a ceramic coating for providing corrosion and friction resistance. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to employ a ceramic coating for Yurek et al.'s catheter sleeve in order to provide corrosion and friction resistance.

Although, Yurek et al. and Davidson do not disclose the ceramic coating including pyrolytic carbon, pyrolytic carbon is a well-known material in the art for providing corrosion and friction resistance on medical tool. Therefore, it would have been obvious in the art at the time the invention was made to coat the catheter of Yurek et al. in view of Davidson with pyrolytic carbon wherein so doing would amount to mere

substitution of one material for another within the same art that would perform equally well in the catheter of Yurek et al. in view of Davidson.
